Problem 1: No More Shouting

Points: 5

Author: Brett Reynolds, Orlando, Florida, United States

Problem Background

It's common knowledge that on the internet, TYPING IN ALL UPPERCASE LETTERS ISN'T VERY POLITE. It just looks like you're shouting at people, which isn't a very good way to hold a conversation. You've been asked to design a browser extension that can (forcibly) calm everyone down by converting UPPERCASE SHOUTING into lowercase whispers. Try to stay calm as you solve this problem.

Problem Description

Your program will be given lines of text in which all letters are uppercase. You must convert these letters to lowercase without otherwise changing the content of the text.

Sample Input

The first line of your program's input, **received from the standard input channel**, will contain a positive integer representing the number of test cases. Each test case will include a single line of text consisting of uppercase letters, numbers, spaces, and/or punctuation.

THIS SENTENCE IS IN ALL CAPS
SHOUTING ISN'T NICE.

Sample Output

For each test case, your program must output the provided string after replacing all uppercase letters with their lowercase equivalents. Spaces, numbers, and punctuation should not be modified.

this sentence is in all caps
shouting isn't nice.
